

New Electrode Delivers Faster Welding Speeds

As your critical requirements demand greater welding speeds to increase productivity and profitability, Select-Arc, Inc. has introduced a premium metal cored, ferritic stainless steel composite electrode designed to provide faster travel speeds than standard 409Ti consumables.

Select HT 409Ti produces a superior smooth spray arc over a wide range of welding parameters. This outstanding wire offers enhanced bead wetting with virtually no spatter and generates increased travel speeds for heightened welding performance.

Available in .045" and 1/16" diameters, **Select HT 409Ti** is ideal for welding automotive exhaust systems, particularly manifolds, mufflers, converters and component tubing.

For more information on **Select HT 409Ti**, contact Select-Arc at **1-800-341-5215** or visit our website at www.select-arc.com .

Select-Arc will be hosting a training session in Houston, TX at our Houston Warehouse & Training Facility on April 15th and 16th. For more information or to register to attend, contact Bill Goodwyn at **(254) 744-1152** or go to www.select-arc.com and click on *Class Registration*.
