

# Select 100C

Low Alloy / Gas Shielded / Metal Cored

PRODUCT DATA SHEET

## FEATURES

- Intended for single and multiple pass welding of some carbon and certain low alloy steels, in the flat and horizontal positions, where a minimum tensile strength of 100,000 psi is required in the deposited weld metal.
- The arc is normally a pure spray transfer, with virtually no spatter emission.
- This electrode is well suited to joining low alloy, high strength steels, such as HY-80, A710, and A514.
- Suitable for use in shipbuilding, earthmoving equipment, and mining machinery, to name a few applications.
- This electrode is an ideal choice for those weldments where distortion must be minimized, and de-slagging is not desirable.
