

Select 90C-M2

Low Alloy / Gas Shielded / Metal Cored

PRODUCT DATA SHEET

FEATURES

- Select 90C-M2 is a premium, composite metal cored electrode, exhibiting superb welder appeal and outstanding mechanical properties.
- Intended for single and multiple pass welding of certain low alloy steels, in the flat and horizontal positions, where a minimum tensile strength of 90,000 psi is required in the deposited weld metal.
- The recommended shielding gas is 90% Argon- 10% CO₂. Other Ar-CO₂ mixtures may be employed, with a minimum of 75-80% argon.
- Select 90C-M2 is an ideal choice for joining low alloy, high strength steels such as HY-80, A514 and A710.
- Earthmoving equipment, mining trucks and machinery, and heavy equipment trailers are some areas where this electrode may be utilized.
- Ideal for those applications where the slag residue and fume emissions of flux cored electrodes are unwanted.

Notice: Be sure to follow all your employers safety practices, policies and procedures when using this product. Refer to CSA W117.2 and ANSI Z49.1 Safety in Welding, Cutting and Allied Processes for further information and the manufactures SDS sheet. The results reported are based upon testing of the product under controlled laboratory conditions in accordance with American Welding Society Standards. Actual use of the product may produce different results due to varying conditions. An example of such conditions would be electrode size, plate chemistry, environment, weldment design, fabrication methods, welding procedure and service requirements. Thus the results are not guarantees for use in the field. The manufacturer disclaims any warranty of merchantability or fitness for any particular purpose with respect to its products.
